

TECHNOLOGY ENHANCED LEARNING

This session will be delivered as a fast-paced, interactive format leveraging some of the technologies discussed during the session. Its focus is on how to effectively integrate technology into courses to enhance student learning and engagement.

It was designed with the intent to:

- share a way of thinking about how to use technology in the teaching-learning process
- provide participants with an understanding of how digital technologies can be used to enhance learning and how avoid counter-productive ways to use them.
- suggest a learning path for interested participants to acquire the understanding, skills and know-how necessary to use digital technologies to enhance the course.

The session will cover possible uses of digital technology for course design, content delivery, and student assessment, all underpinned by insights from neuroscience and cognitive research. Participants will get exposure to practical aspects relevant to using various digital technologies to deliver next-generation courses.
